ADVANCEDCARE BEACON

An Efficient Tracking Solution for Healthcare Organizations

Beacon provides real-time indoor and outdoor tracking for assets, patients, and personnel. By using state-of-art technology, Beacon offers healthcare organizations reliable business intelligence that allows them to improve their operational efficiency.

TRACKING

Beacon provides the hardware and software to track and manage healthcare equipment, from stretchers and wheelchairs to blood gas monitors and oxygen tanks. Every movement is tracked in real-time and can be monitored on a multi-level floor plan of your facility.

Beacon also offers non-invasive tracking for patients to ensure their safety within your healthcare facility. The credit-card sized badges fit into slim pockets for easy portability. The same beacon badge may also be used to provide real transparency over the movement of your healthcare staff.

Highlighted features:

- ✓ Asset, patient, and personnel location tracking
- ✓ Indoor map including multiple floors and venues
- ✓ Compass, zoom and rotation control
- ✓ Customizable points of interest (POI)
- ✓ Search and filter capabilities

BIG DATA & INTELLIGENCE

Through Beacon, healthcare teams gain valuable insights about the movement, usage, and efficiency of the moving assets and people in their facilities. How much equipment is being used? Where does your staff spend most time? Where is the most activity within your facility?

Beacon offers healthcare organizations this type of data intelligence to improve their operational efficiency, reduce unnecessary costs, increase the safety of patients and productivity of staff.

Highlighted features:

- ✓ Real-time movement tracking
- ✓ Asset usage monitoring
- ✓ Facility activity monitoring

NOTIFICATIONS & ALERTS

Beacon offers customizable alerts to flag specific events or movement. A geofence can be determined for every asset, patient, and staff member that is being tracked through Beacon. Movement outside of the Geofence triggers alert notifications. Other alerts can be set up for time restrictions around asset use, patient access to certain areas in your facility, and more.

Alert notifications are most effective when used in parallel with the business intelligence to closely monitor activity within your facility and to enforce optimized strategies within your operation.

Highlighted features:

- ✓ Geofencing
- ✓ Movement alerts
- ✓ Facility access alerts
